PROFESSIONAL SUMMARY

Software Engineer (B.Sc., Damascus University, 2026) with 3+ years of experience building backend and full-stack systems, specializing in domain-driven Laravel architecture and production Next.js/TypeScript applications. Architected ROADMATE, a 15-domain, 107-endpoint backend simulating government-grade services (verified identity onboarding, traffic-violation and mandatory-insurance payments) with circuit-breaker resilience, idempotent payments, layered security, and a 431-test suite. Currently shipping production web applications for a remote international team. Strong in Arabic/RTL products, AI-integrated pipelines (speech-to-text, LLM parsing, RAG), end-to-end deployment, and developer mentorship.

TECHNICAL SKILLS

Languages: PHP, TypeScript, JavaScript, C++, Java

Backend & Architecture: Laravel 12, Domain-Driven Design (DDD), Clean/Layered Architecture, Service Layer, Design Patterns, Circuit Breaker, Event-Driven Design, NestJS, CodeIgniter

API & Security: RESTful API Design, API Versioning, Laravel Sanctum, RBAC & Policies, Token Rotation, Rate Limiting, Idempotency, Audit Logging, OTP Authentication

Frontend: Next.js, React, TypeScript, HTML5, CSS3, Bootstrap, Responsive Design, RTL / Arabic Localization, Three.js

Databases: PostgreSQL, MySQL, Redis, Eloquent ORM, Query Optimization, Indexing

Real-Time & AI: Laravel Reverb (WebSockets), Live GPS Tracking, Groq Whisper (Arabic STT), Llama 3.3 70B, RAG

Testing: PHPUnit 11, Mockery, Unit & Feature Testing, Business-Logic Isolation

DevOps & Tools: Git, GitHub, CI/CD via GitHub + Vercel, Production Deployment, cPanel, DNS & Domain Configuration, Composer, NPM, Postman

PROFESSIONAL EXPERIENCE

Full-Stack Developer — AFAQ Company

Libya (Remote) | 02/2026 – Present

- Build production web applications with Next.js and TypeScript, using a reusable component architecture and responsive, performance-focused UI.
- Integrate REST APIs and contribute to production systems within a distributed remote team using Git-based workflows.

Full-Stack Developer — Osus Company

Remote (Turkey) | 05/2025 – 01/2026

- Built and deployed full-stack applications with Laravel and CodeIgniter, designing scalable database architectures and APIs.
- Managed production deployments (server configuration, domains, cPanel) and provided ongoing support for live systems.
- Delivered programming training (PHP and web fundamentals) to junior team members.

Technical Lead & Mentor — Developer Education

YouTube @mohamed._qatish | 04/2023 – Present

- Designed and taught advanced engineering curricula, including an Advanced Laravel API course (rate limiting, localization, multi-device Sanctum authentication, service-layer architecture, API security, advanced Eloquent) published on Gumroad.
- Course: mohamedqatish.gumroad.com/l/advanced-laravel-12-course
- Produced full courses on Laravel API (beginner to advanced), C++ STL, and competitive programming, mentoring 5,000+ developers.

SELECTED PROJECTS

ROADMATE — Syrian Driver Vehicle Services Platform

02/2026 – 08/2026

Backend Developer & Domain Architect | University Capstone, Damascus University | github.com/MohamedQatish/backend-car-services

Laravel 12 · DDD · PostgreSQL · Redis · Sanctum · Reverb · PHPUnit

A 15-domain modular backend unifying all vehicle-related services for Syrian drivers: verified identity onboarding via government-issued invitation codes, online traffic-violation and mandatory-insurance payments, SOS emergency response with live GPS tracking, an Arabic RAG-powered legal assistant, and voice-driven maintenance logging, all behind one secure, bilingual, versioned API.

- Architecture:** Delivered a 15-domain DDD backend (515 files, ~37,930 LOC, 97 use cases, 51 contracts, 65 DTOs) with strict Application / Domain / Http / Infrastructure layering, exposing 107 versioned REST endpoints over a 48-migration PostgreSQL schema.

- **Emergency (SOS) domain:** Engineered 10 use cases, 4 domain events, and 4 listeners with a single-active-event invariant, an ownership-safe tokenized public live-tracking map, and automatic emergency-contact notification, turning a manual, untraceable process into a one-tap auditable flow.
- **Security:** Implemented Sanctum 15-minute access tokens with SHA-256-hashed 7-day refresh tokens, a 4-role / ~24-permission RBAC model enforced at route and policy level, 46 validated request classes, custom security-header middleware, and 4 tiers of rate limiting.
- **Resilient integrations:** Built a Circuit Breaker (5 failures / 60s cooldown), retry and timeout policies on every gateway, pluggable Mock↔Real implementations behind 51 interfaces, and a full external-sync audit log (payloads, hashes, durations, retry counts).
- **Payments:** Implemented a unified idempotent payment orchestration layer (Paymera) for three payable types (traffic violations, mandatory insurance, tracking subscriptions) with duplicate-payment prevention and event-driven downstream activation.
- **AI voice pipeline:** Delivered an Arabic voice-to-data flow using Groq Whisper (STT) and Llama 3.3 70B parsing to convert free-form speech into structured, categorized maintenance and expense records validated against vehicle ownership.
- **Quality:** Authored 111 test files within a 431-test / 1,410-assertion PHPUnit 11 + Mockery suite that isolates business logic from all external systems.

Complaint Management System — NestJS

Government Services

Backend Developer | github.com/MohamedQatish/GovComplaint

NestJS · REST APIs · OTP Auth · RBAC · Audit Logging · Concurrency Control

- Built secure APIs serving both a mobile app (citizens submit complaints, upload files, track status) and a web dashboard for government employees.
- Implemented OTP authentication, RBAC, detailed audit logs, and strict concurrency control to prevent conflicting updates across a transparent complaint workflow.

Academy Management System — Laravel (Large-Scale)

08/2025

Backend Developer | github.com/NoorAlden21/arabian-group-academy

Laravel · MVC + Service Layer · Sanctum · RBAC

- Architected an institute platform for admins, teachers, students, and parents: schedules, attendance, exams and grades, homework, and a parent tracking dashboard.
- Applied MVC with a Service Layer, Laravel Sanctum authentication, and secure role-based access control for scalability.

Baklava E-Commerce Platform — Next.js (Production)

02/2026

Full-Stack Developer | alemelbklawa.ly

Next.js · Database Design · Deployment · DNS · Performance & Security

- Owned the full lifecycle of a live e-commerce site: database design, Next.js development, server deployment, DNS/domain setup, performance optimization, and security hardening.

Banks & Insurance Magazine — Next.js

06/2026

Full-Stack Developer | banks-insurance.vercel.app

Next.js · Markdown CMS · RTL / Arabic · Vercel CI/CD · Turbopack

- Built an Arabic RTL financial news platform with a Markdown-based CMS, dark/light mode, dynamic filtering, search, and category browsing.
- Achieved 90+ Lighthouse scores with Turbopack optimization; deployed on Vercel with automatic CI/CD through GitHub.

EDUCATION

B.Sc. in Information Technology Engineering (Software Engineering)

Graduated 2026

Damascus University, Faculty of Informatics Engineering | Damascus, Syria

LANGUAGES

Arabic: Native **English:** Professional working proficiency
